

L322 to 2006 starter relay security module bypass.

WARNING

Before performing this modification, please be aware that after this is done, the vehicle will start in ANY gear, not just Park and Neutral, so always ensure the vehicle is in Park or Neutral before attempting to start the engine.

Security module Location:

The white module under the centre console cover, to the side of and below the shifter, behind the ignition key.

Procedure:

- Disassemble centre console to access the security module.
- Unplug connector C0059 shown in the picture above for ease of working on it.
- Cut and connect the Thicker Red and Black wires together.
- Picture on the right identifies the 2 wires you need to connect.
- Reconnect connector C0059 to the security module.
- Re assemble console.
